## ABOUT ME

Software Engineering student at TARUMT with a strong foundation in Object-Oriented Programming, proficient in Java, Python, C++, JavaScript, TypeScript and Kotlin. Experienced in building cross-platform mobile applications with React Native and passionate about backend development and software engineering fundamentals. Eager to join a fast-paced team to develop web, mobile and desktop applications, and grow into a Full Stack or Backend Developer role.

## EDUCATION

|             |                                                                                                                                                               |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026 - now  | <b>Bachelor in Software Engineering</b>                                                                                                                       |
| TARUMT KL   | Coursework: Data Structures & Algorithms, Software Engineering, Artificial Intelligence.                                                                      |
| 2024 - 2026 | <b>Diploma in Computer Science</b>                                                                                                                            |
| TARUMT KL   | Coursework: Object-Oriented Programming Techniques, Database Development and Applications, Software Development Fundamentals, Mobile Application Development. |

## WORK EXPERIENCE

### Industrial Trainee — Software Engineering (R&D Department)

Deng Kai Sdn Bhd | Jan 2026 - May 2026

- Developed and maintained 4 React Native mobile apps for hardware control and monitoring over BLE, Wi-Fi, and MQTT.
- Diagnosed and fixed communication bugs, merged separate BLE/Wi-Fi interfaces into one unified app, and improved performance through code refactoring.

## PROJECT EXPERIENCE

### Resort Management System — Group Project

Data Structures Coursework | TARUMT

- Designed and implemented a generic Queue ADT (linked-list based) in Java for a resort's walk-in registration module.
- Collaborated with a team integrating multiple custom data structures — Queue, BST, Set, and List — across different system modules.

## SKILLS

- |                  |                |              |              |
|------------------|----------------|--------------|--------------|
| • Java           | • Python       | • JavaScript | • TypeScript |
| • Kotlin         | • React Native | • C++        | • Git        |
| • Android Studio | • Oracle SQL   |              |              |
